

## DZ/EZ Diesel Oxidation Catalyst

- The DZ series was the first diesel purifier in the industry to feature quick release band clamps. This allows the center body to be readily removed for periodic engine-out opacity measurements or for purifier cleaning. These DZ purifiers are also available with modular add-on DMS and DMXS silencers.
- The DZ and EZ series supported on a metallic substrate which affords exceptional resistance to vibration and affords the lowest possible exhaust backpressure.
- The EZ purifier offers the same metallic substrate based catalyst as the DZ purifier but in an all welded purifier to afford the most compact size and lower cost.

- The DZ and EZ diesel oxidation catalyst is made by high precious metal loading metallic honeycomb structure plus 100% Stainless-Steel Components, with operation life up to 10,000-12,000 hrs.
- The DZ and EZ series is specially designed for easy installation and simple maintenance, and can be easily attached to the DMS & DMXS-II Add-on Silencers.
